receiving at an at least one remote access server data associated with a modem-based data session established via at least one circuit-switched network communicating with at least one data network that facilitates asymmetric data routing; encapsulating at the at least one remote access server packets of the data to be sent in a tunneling protocol for delivery via one or more virtual point-to-point connections; communicating the tunneling-protocol-encapsulated data packets via at least one virtual point-to-point connection over at least one communications path traversing the at least one data network and operable to convey data-types that utilize a point-to-point connection, wherein the at least one communications path couples the at least one remote access server to at least one enhancement cluster based on a destination address associated with the tunneling-protocolencapsulated data packets, and wherein the virtual point-to-point connection emulates a dedicated point-to-point connection path connecting the at least one remote access server to the at least one enhancement cluster; and receiving and processing the tunneling-protocol-encapsulated data packets in the at least one enhancement cluster to enhance the data connection.

Allowable Subject Matter

3. The following is a statement of reasons for the indication of allowable subject matter: a destination network; Baldwin et al. (PG PUB 2003/10149746) discloses having an ensobox: an Internet service provider appliance that enable an operator thereof to offer a full range of Internet services. Balwin et al. also discloses the subscribers dial into the access node over the public telephone network using a modem and standard dial-up networking software on their computer and when a subscriber dials the ensobox telephone number, the call is routed to one of the modem ports on the Remote Access Server. Baldwin further discloses that the ensobox provides dial-up access to the Internet and that the core node within the ensobox is the "middle man" between the Internet and the Public Switched Telephone Network. Baldwin further discloses PPP(point to point) sessions transmitting over serial lines. In addition, Baldwin discloses the ensobox processing data within PPP session from a PSTN to the Internet. Baldwin discloses having a PPP session within a network that comprise of a

PSTN and the Internet. Araujo et al. (US Patent 6,118,785) discloses having a pointto-point protocol with a signaling channel and also having a enhanced PPP whereby transmitting data within a VC virtual circuit to ISP Remote Access Server and encapsulation for PP data packets sent between two L2TP endpoints. However, the prior art fails to anticipate or render obvious the following recited specific features in claim 1 and similar claims 17,33, 41 and 49: "an input interface that receives data associated with a modem-based data session established via at least one circuitswitched network communicating with at least one asymmetric-routing data network that is capable of facilitating a transfer over the at least one asymmetric-routing network of data packets that are encapsulated in a tunneling-protocol and that are associated with the modem- based data session and operable to send using the tunneling protocol for delivery via one or more virtual point-to-point connections based on a destination address associated with the tunneling-protocol-encapsulated data packets; at least one enhancement cluster for receiving and processing the tunneling-protocolencapsulated data packets that enhances a connection from a source to a destination network; and at least one virtual point-to-point connection for communicating the tunneling-protocol-encapsulated data packets over at least one communications path traversing the at least one asymmetric-routing data network and operable to convey data-types that utilize a point-to-point connection, wherein the at least one communications path couples the input interface to the at least one enhancement cluster based on the destination address, and wherein the at least one virtual point-

to-point connection emulates a dedicated point-to-point connection path connecting the input interface to the at least one enhancement cluster."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
